## How the federal tax system affects what you can buy.

## How much do you have to earn to have $\$ 100$ to spend?

Critics of the FairTax claim that the FairTax will increase the cost of everything you buy by $30 \%$; that you will have to pay $\$ 130$ for an item with a price tag of $\$ 100$.

Let's take a look at how the existing federal income/payroll tax system affects what you can spend. The chart below shows how much a person has to earn today in order to have $\$ 100$ take-home pay to spend, depending on whether they are an employee or self-employed, and what their tax bracket is. The figures below are based on marginal tax rates, which means that they tell you how much additional money you would have to earn to have an additional $\$ 100$ to spend.

| Employment Status | Income Tax Bracket |  |  |  |
| :--- | ---: | ---: | ---: | :---: |
| $\mathbf{1 5 \%}$ |  |  |  |  |
| $\mathbf{y y}$ |  |  |  |  |
| Employee | $\$ 129.28$ | $\$ 148.48$ | $\mathbf{2 8 \%}$ |  |
| Gross Earnings | $-\$ 19.39$ | $-\$ 37.12$ | $\$ 155.40$ |  |
| Income Tax | $-\$ 9.89$ | $-\$ 11.36$ | $-\$ 43.51$ |  |
| Payroll tax at $7.65 \%$ | $\$ 100.00$ | $\$ 100.00$ | $\$ 11.89$ |  |
| Available Spending | 1.29 | 1.49 | 1.50 |  |
| Price to earnings multiplier |  |  |  |  |
| Self-employed person | $\$ 143.47$ | $\$ 167.50$ | $\$ 176.37$ |  |
| Gross Earnings | $-\$ 21.52$ | $-\$ 41.88$ | $-\$ 49.38$ |  |
| Income Tax | $-\$ 21.95$ | $-\$ 25.63$ | $-\$ 26.98$ |  |
| Payroll tax at $15.3 \%$ | $\$ 100.00$ | $\$ 100.00$ | $\$ 100.00$ |  |
| Available Spending | 1.43 | 1.68 | 1.76 |  |
| Price to earnings multiplier |  |  |  |  |

As a taxpayer, under the FairTax system, you would have to earn $\$ 130$ to spend $\$ 100$. Under the income/payroll tax system, in the $15 \%$ bracket, that same taxpayer would have to earn $\$ 129$ if he/she were an employee, or $\$ 143$ if self-employed in order to have an additional $\$ 100$ to spend. The selfemployed person has a higher figure because he/she pays both the employer and employee portions of payroll taxes.

For a family in the $25 \%$ tax bracket, the difference is much greater. The employee would have to earn an additional $\$ 149$ to have $\$ 100$ to spend; for the self-employed person it would be an additional $\$ 168$ to have $\$ 100$ to spend.

So if you want to save $\$ 10,000$ for a down payment on a house or for college tuition, you would have to earn an additional $\$ 2,928$ to $\$ 7,637$ to be able to make that $\$ 10,000$ down payment, depending on your tax bracket and employment status.

Under the FairTax, you would get to keep all the income you earn. If you spend it, you would pay the tax; if you put it into savings you pay no tax. You also pay no tax if you spend it on education tuition or donate to charity as these items are not taxable.
